

Spelling list: Tissues and Organs

tissue	A tissue is a group of cells with similar structure and function working together.
organ	Organs are made up of tissues. One organ can contain several tissues, all working together, e.g. the stomach.
xylem	Xylem is the non-living transport tissue in plants, which transports water around the plant.
phloem	Phloem is the living transport tissue in plants which carries sugars around the plant.
multicellular	A multicellular organism is one which is made up of many different cells that work together. Some of the cells are specialised for different functions in the organism.
differentiate	During the development of a multicellular organism, cells differentiate and become specialised to carry out different jobs.
