

Spelling list: Exploring Science 7ic

renewable energy resources

geothermal	Making electricity using heat from rocks underground is called geothermal power.
nuclear	Generating electricity by using the energy stored inside uranium is called nuclear power.
solar	Solar power is generating electricity by using light or heat energy from the sun.
hydroelectric	Hydroelectric power is making electricity by letting falling water turn turbines and generators.
wind	Electricity can be generated using the energy from the wind .
wave	Electricity can be generated using wave energy.
tidal	Tidal power generates electricity using the energy transferred from the tides.
biomass	Biomass fuel comes from plants, animals or their wastes.
joule	The unit for measuring energy is called a joule .
fossil	Coal, oil and natural gas are fossil fuels and they are non-renewable which means they cannot be replaced.
